# A Path to Health Equity in the AI Healthcare Era

**Elizabeth Hampson**

Partner, Health Innovation Strategy and  
Deloitte Health Equity Institute Europe

September 2023

# Health Equity is more than just equal access to quality care ...

Health Equity is the fair and just opportunity for everyone to fulfil their human potential in all aspects of health and wellbeing

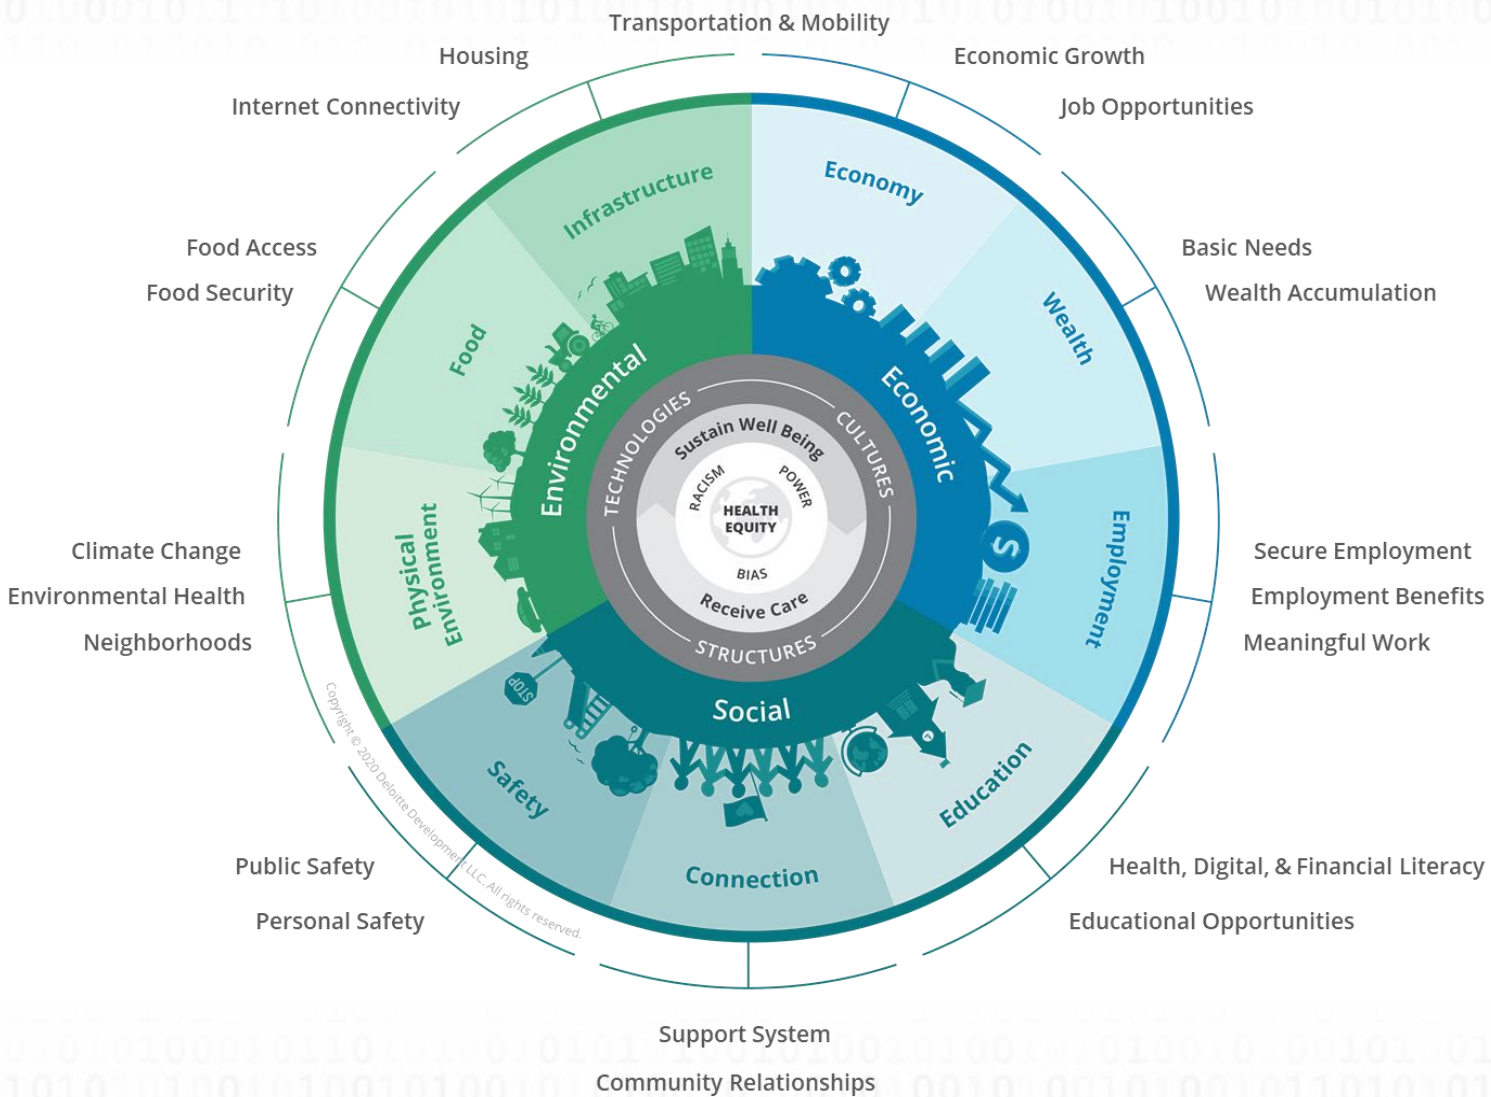

## Is this equity or equality?

A pharmaceutical company is recruiting for a clinical trial. In order to meet their diversity targets, they are accepting eligible patients across all patient groups (genders, ethnicities, ages etc.)

# Where do health inequalities exist?

Social determinants of health, such as housing, education and employment opportunities can account for up to 80% of health outcomes

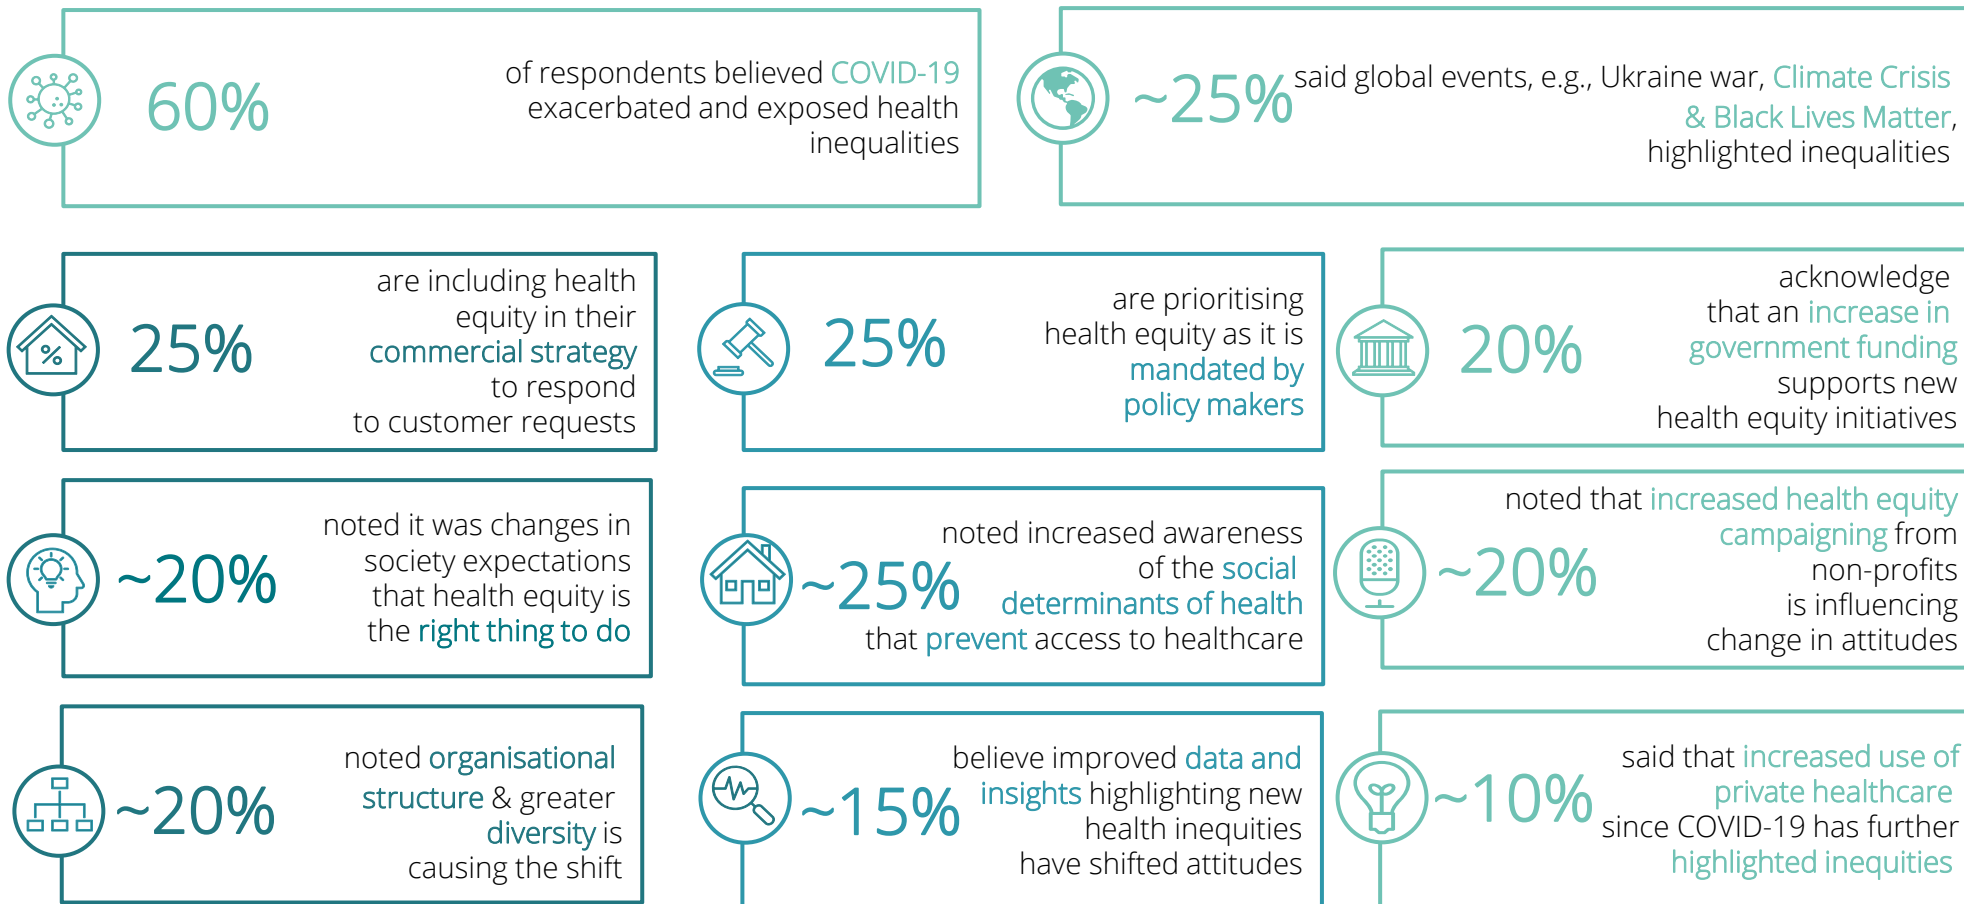

# Where do health inequalities exist?

# All members of the ecosystem are shifting their attitudes positively towards health equity

## 100%

of healthcare and life science stakeholders believe their **health equity attitudes** have **strongly shifted** since 2018

# Not only is health equity a moral imperative, but there is also a strong business and organizational case to act

## PATIENTS

- Reduce variation in patient access and outcomes
- Support health systems to improve care
- Act on ESG ambitions

## BUSINESS

- Drive improved patient outcomes and access
- Grow revenue by unlocking untapped markets and customer segments
- Reduce compliance risks and show impact to investor community

## STAKEHOLDERS

- Build and retain customer trust & improve company / brand perception
  - Develop partnerships & strengthen relationships across the health ecosystem
- Attract, engage and retain top, diverse talent

ALL COMPANIES ARE HEALTH CARE COMPANIES

# Top current health equity strategies

## Inclusive R&D

Leveraging RWE to Increase patient diversity in clinical trials, and adopt equity by design principle in product pipelines

## Improving data, analytics & technology infrastructure

Improving data & analytics and technology infrastructure to support strategy & implementation, ensuring the right data is captured in local settings/stratified to vulnerable patient populations

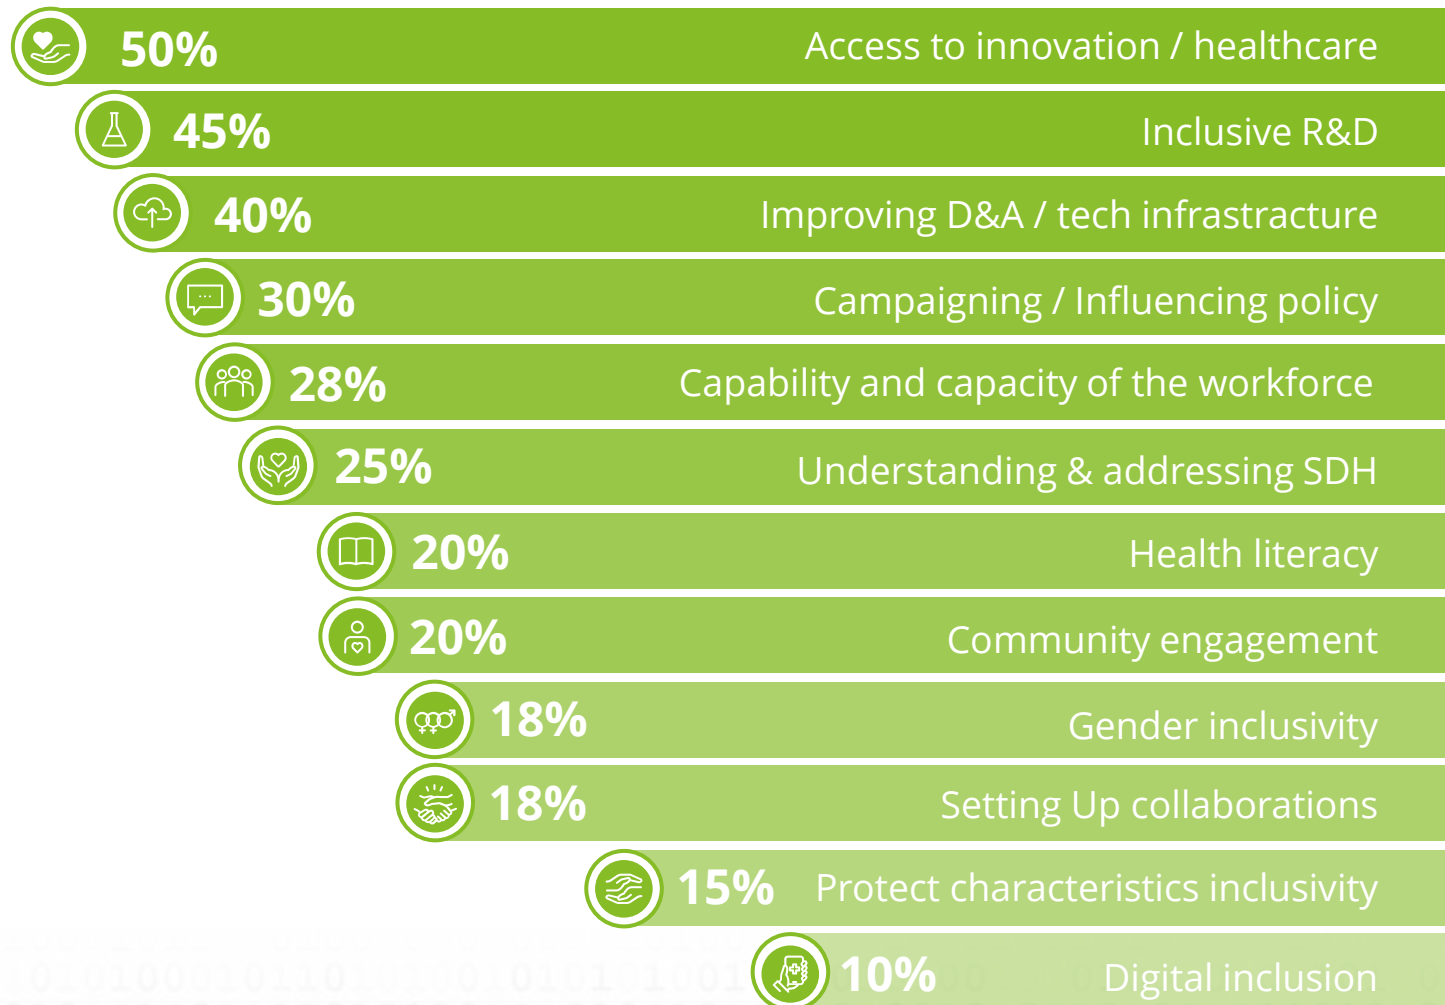

## Health literacy

Empowering vulnerable patients to navigate the healthcare pathway e.g. digital tools that translate Tx / CT options into laymen's terms

## Digital inclusivity

Partnering with telecoms (5G for rural/disadvantaged communities) and invest in user experience and talent to address the divide caused by digital tools

# Actions to enable a more equitable future

## Addressing current drivers of health inequity

Training and education of workforce; working to embed health equity competency as core

Digitally inclusive service design, and improving technology literacy including addressing device and connectivity poverty

Language inclusive healthcare services and digital tools to enable everyone to access and receive equitable care

Including gender differences into health care pathways and research

## Preventing future drivers of health inequity

Diversify -omic and other datasets to enable targeted care for all populations

Privatisation / consumerisation of healthcare driving inequalities between low and high socioeconomic groups

Health literacy and addressing misinformation to eliminate mistrust of medicines and target hard to reach patients

Addressing bias in AI to ensure its adoption does not exacerbate existing system bias and challenges

## Working together to achieve health equity

Restructure business models to create bold solutions; A "Super Matrix" approach to bring stakeholders together

Improved data and technology infrastructure to facilitate health equity strategies e.g. data sharing, system & IT interconnectivity between ecosystem members

Increased focus and visibility across Europe driving changes in policy and providers to improve access

Encourage greater due diligence to ensure that deployment of equitable solutions is viewed as a collective responsibility

# The Future of Health

## A path to equity in an AI health era

# AI can be a gamechanger, but it may also exacerbate existing bias in the health system if used without care

## Potential benefits of AI

### Population Engagement

AI can be used to improve awareness of prevention strategies and encourage individuals to engage with health initiatives, including screening programmes

### Patient Experience

Providing a tailored patient experience and easier access to care may improve patient engagement and ownership for their healthcare needs

### Clinical Outcomes

Improving clinical processes and decision support with AI solutions can provide healthcare professionals more time to provide patient-centred care

### Efficiency and cost

Encouraging patient engagement and improving access to healthcare may reduce costs by improving overall population health and ensuring that conditions are diagnosed and treated at an early stage

## Potential for AI to exacerbate bias

### The cost of using *inappropriate* data sets<sup>1</sup>

- An algorithm using patient's health costs as a proxy for estimating their health needs assigns Black patients the same level of health risk as White patients
- The data used is **inadequate and exacerbates racial bias** as less money is typically spent on Black patients than White patients with the same health requirements

### The cost of using *unrepresentative* data sets<sup>2</sup>

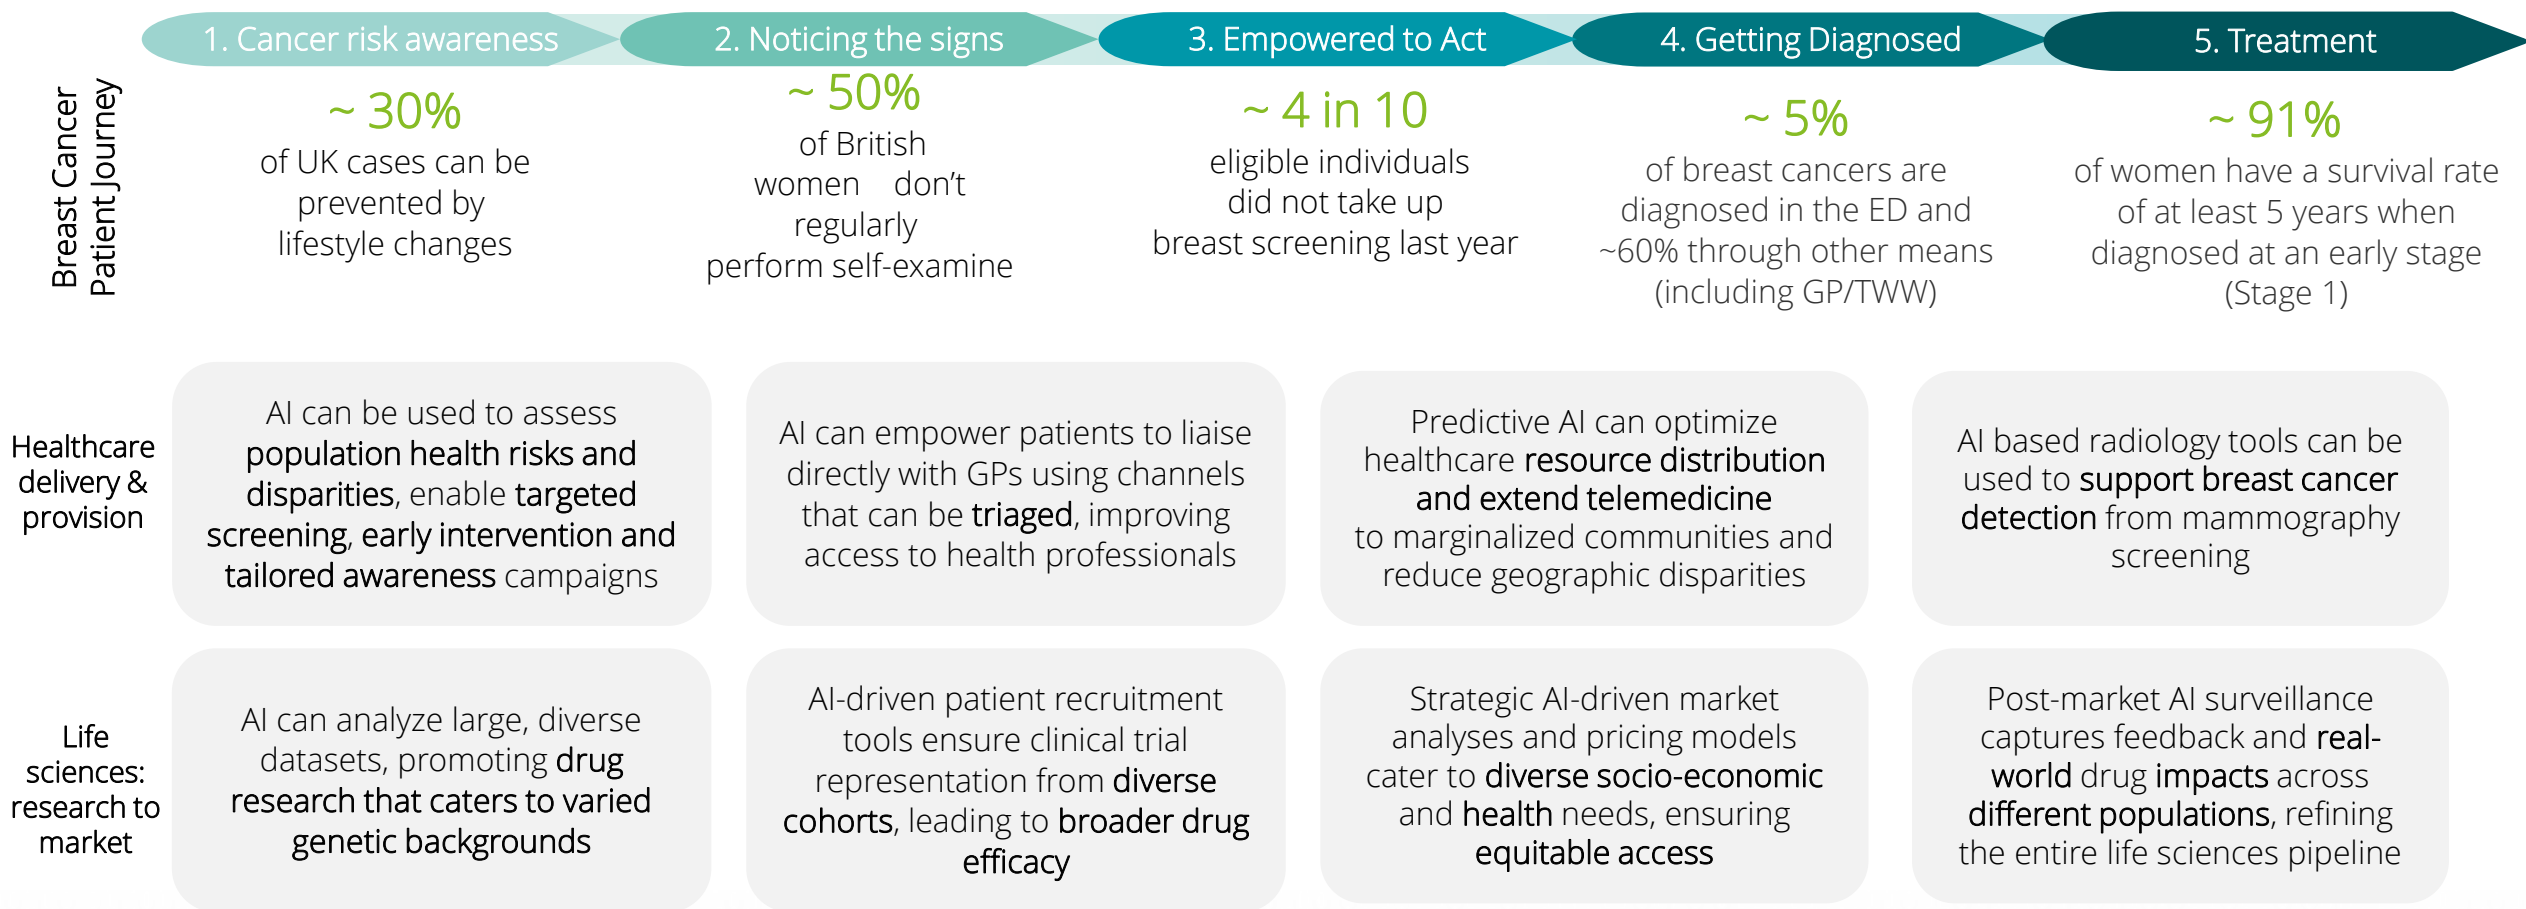

- Researchers leveraged publicly available medical imaging data to train an AI system to perform computer-assisted diagnosis of thoracic diseases
- They noticed that system **performance decreased for underrepresented genders** when the data set did not comply with a minimum gender balance

# Patients, ethics and transparency are central to AI development

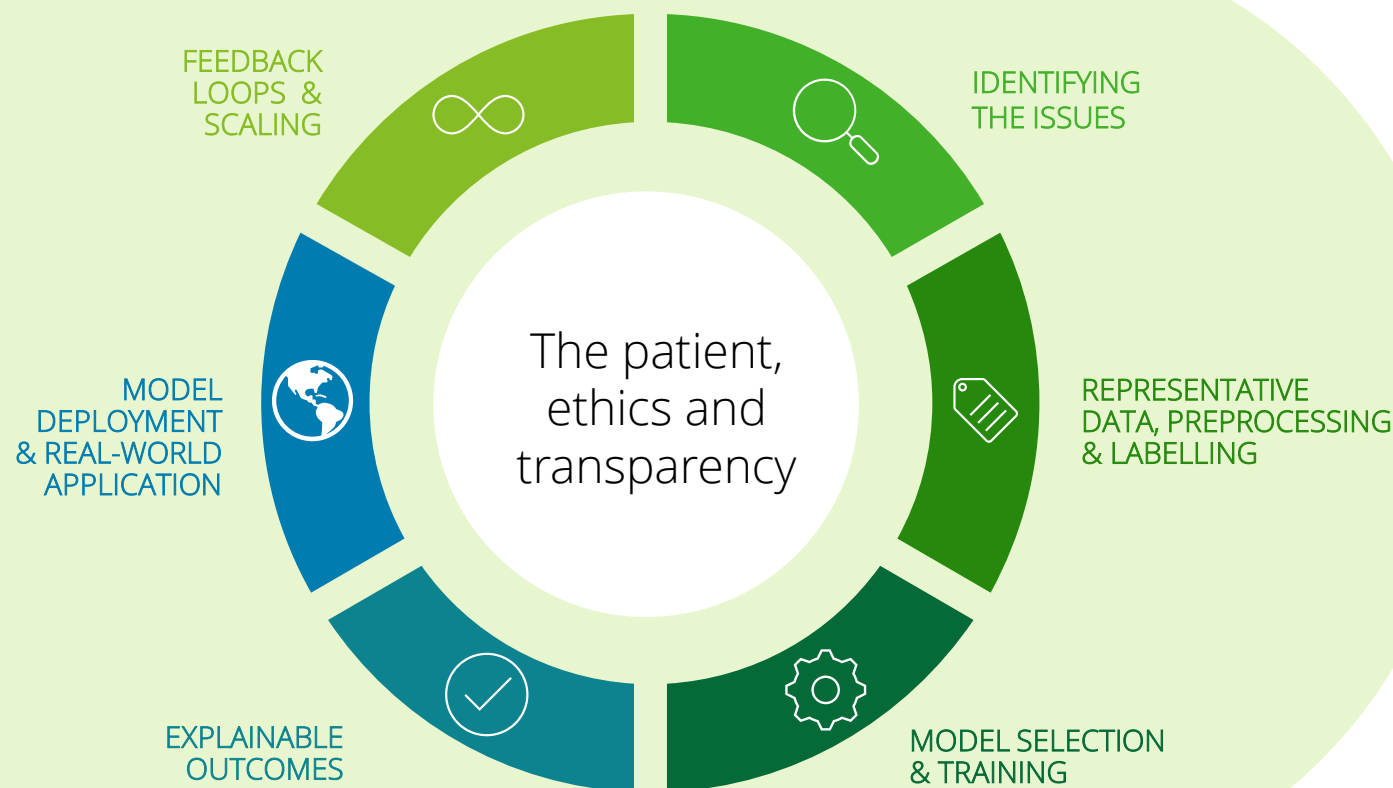

## Compounding Impact of Algorithm Outputs

The outputs of AI algorithms, especially if they're biased, can feed back into the system, further reinforcing and amplifying biases in a vicious cycle.

Over time, this can lead to significant health inequities where entire populations are left out of medical advancements

Therefore, a holistic and thoughtful approach is required for selecting use cases and deploying these solutions to appropriately manage that risk

"Human-in-the-loop" will be the default and Generative AI should be viewed as an accelerator and an enabler to colleagues

# The Zero Gaps Pledge

At the World Economic Forum Annual Meeting 2023 in Davos, the Global Health Equity Network (GHEN), supported by Deloitte, launched the Zero Health Gaps Pledge, the first ever global, multi-sector CEO-level pledge for health equity

## ZERO HEALTH GAPS PLEDGE

A public commitment from CEOs to improving health equity globally and embedding health equity across their organizational strategies, operations and investments.

### Sample Pledge Commitments:

1

**Assess health equity needs** across our workforce, consumer base, communities, and ecosystem.

2

**Measure impact of our health equity work** with disaggregated data so variation can inform decisions.

3

**Help advance the ethical use of data** and strong privacy controls.

4

**Inspire other organizations** across sectors to act, to share learnings, and to accelerate the work of the GHEN.

5

**Seek to understand how our organization can address root causes** of health inequities.

What action will you and  
your organisation take?

Thank you!
